```
comprising a sequence without signal peptide and the nucleic acid cencoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive conclude to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. The PRO polypeptides or polymucleotides are also useful as pharmaceuticals, diagnostics, come biological activity of a cell. The PRO polypeptides or polymucleotides are also useful as pharmaceuticals, diagnostics, come biological activity of a cell. The PRO polypeptides or commandiate and protein and for modulating at least concerns and commandiate are so incompared to the concerns and diagnostic determination cancers (e.g. colon, lung or breast cancers) and diagnostic determination of the presence of these cancers. The PRO polypeptides are also useful as compared to the compared to the concern as the protein and colon, lung or breast cancers. The propagation of the presence of these cancers or for chromosome identification. The PRO genes concerns the protein as hybridisation probes or for screening libraries of human colon, genomic DNA or mRNA. The PRO genes may also be used in gene therapy, particularly for replacing a defective gene. The sequences or presented in ABUS8900-ABUS9046 are the PRO polypeptides of the invention.

Repartic lectin - rat

RyAlternate names: ASGF; asialoglycoprotein receptor

C;Species: Rattus norvegicus (Norway rat)

C;Date: 28-Feb-1986 #sequence revision 04-Dec-1986 #text_chan;

C;Accession: A92497; A94020; B94020; A54727; A03166
